DETAILED ACTION

Continued Examination Under 37 CFR 1.114

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 10/02/2003 has been entered.

Drawings

2. The drawings filed on 10/02/2003 are acceptable subject to correction of the informalities indicated on the attached "Notice of Draftsperson's Patent Drawing Review," PTO-948. In order to avoid abandonment of this application, correction is required in reply to the Office action. The correction will not be held in abeyance.

Allowable Subject Matter

3. Claims 1-27, 29-36, 38-49 and 51-56 are allowed.

4. The following is an examiner's statement of reasons for allowance:

A search of the prior art did not disclose an in-plane switching mode liquid crystal display comprising a combination of structural elements, more specifically:

(a) A transparent electrode asymmetrically overlapping a portion of the first electrode, the transparent electrode preventing vertical cross talk caused by

Art Unit: 2871

the data lines and the second electrode, as recited in the instant claims 1, 14, 20 and 27.

(b) A field distortion electrode on the protection film overlapping at least a portion of the common electrode, the field distorting electrode preventing vertical cross talk caused by the data line and the data electrode.

(c) A method of manufacturing an in-plane switching liquid crystal display comprising: forming a field distortion electrode on the protection film overlapping at least a portion of the common electrode, the field distorting electrode preventing vertical cross talk caused by the data line and the data electrode.

The prior art neither discloses the asymmetrical overlapping of the first electrode nor the transparent electrode preventing the vertical cross talk. The prior art by Shin et al. (U.S. Patent No. 6,549,258) discloses a symmetrical passivation layer (insulator) (120) overlapping the first electrode (119) to prevent the cross talk (Fig. 2B).

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
